

International Laser Group (ILG) Announces Worldclass Distribution Capabilities

WOODLAND HILLS, Calif. – International Laser Group

International Laser Group (ILG) announced the opening of its third US distribution center. The need to open a third facility reflects ILG's success and transforms their already-strong distribution capabilities into a Worldclass Distribution Network. The decision to add a new distribution center is part of ILG's overall strategy to position itself for future business growth, allowing them to provide faster, more cost-effective delivery to their customers nationwide.

"We feel obligated to provide our customers with as many business advantages as possible," stresses Gary Michaels, CEO. "Freight has always been a major component in product cost. Opening the Georgia facility allows us to supply fast, accurate and economical nationwide delivery. We are now able to offer next day delivery at ground prices almost anywhere coast-to-coast. Our customers will benefit from the lower freight expense, while the reduction in transit time means they can decrease their inventories and free up costly warehouse shelf space."

The new facility, located just outside Atlanta, Georgia, carries a full line of ILG-manufactured products. Its main function will be to handle distribution into the Eastern States, but the strategic location allows it to supplement ILG's Chicago facility in servicing the entire Mid West.

ILG Distribution Center Territories

Selecting a major city in the South was a response to the company's rapidly-growing customer base along the Eastern Coast. The new Atlanta warehouse will distribute ILG products from Florida through the mid-Atlantic states of New York, New Jersey, Maryland and Pennsylvania and as far north as Maine. The Chicago warehouse will focus on the MidWestern states from Texas through Minnesota's northern border, and from the Rockies to Ohio's border on the East. The Los Angeles warehouse will continue to handle distribution west of the Rockies.

Founded in 1988 and based in Woodland Hills, California, ILG has grown to a multi-million dollar manufacturer, offering a complete line of printer, fax and multi-function cartridges. The company's manufacturing facility boasts a combined production and warehouse capacity of more than 90,000 square feet. Equipped with the most advanced manufacturing equipment and a highly-regarded reputation for superior product quality, ILG serves as one of the nation's premier beta-test sites for advances in cartridge chip technology, toner formulation, and other aftermarket innovations.
