

International Laser Group (ILG) Implements New Color Laser Technology

April 2006

Woodland Hills, CA - International Laser Group (ILG), one of the Top 10 contract manufacturers of compatible laser, inkjet and fax replacement cartridges, in conjunction with a major sealing technology innovator, has implemented a new non-split cartridge sealing process that provides increased product quality and makes ILG color laser cartridges look and perform just like the OEM.

ILG prides itself on offering premium-quality compatibles for all the most popular color laser printers. However, consistently building a reliable, high-quality color laser cartridge has been difficult, and often expensive. "We are always looking for new technology to decrease costs and improve the appearance and performance of our cartridges," notes Joe Shulman, COO. "Non-split sealing meets all these objectives."

ILG currently offers non-split cartridges for the 1500 / 2500 / 2550 / 3500 / 3700 and 4600 family of HP color laser printers. "Our in-house testing has shown that this new sealing process eliminates leaking while maintaining cartridge integrity. These cartridges meet or exceed OEM specifications in both quality *and* appearance," explains Mr. Shulman. "We have stopped using the split-cartridge approach for most of our color cartridges, and plan to implement non-split sealing for our remaining color SKUs as soon as it becomes available."

ILG's color laser supplies offer significant savings to the consumer, while providing the same crisp images, brilliant, true-to-life colors and batch-to-batch color consistency as their OEM counterparts. Every ILG cartridge is required to pass multiple quality control tests, and is backed with a 100% Quality and Satisfaction Guarantee. ILG's color laser line features ISO 9002 certified graphics-grade true chemical toner.

Founded in 1989, ILG established itself as an industry leader in computer products, and has grown to a multi-million dollar manufacturer of imaging supplies. Based in Woodland Hills, California, the company's world-class manufacturing facility boasts a combined production and warehouse capacity of more than 80,000 square feet, and produces more than 60,000 cartridges per month with a defect rate of less than 1%. Private-labeling is offered free-of-charge, and custom packaging is available upon request.
