

ILG (International Laser Group) Qualifies MICR Cartridges to Meet U.S. and Canadian Standards

November 2007

WOODLAND HILLS, Calif. —International Laser Group (ILG), one of the industry's leading manufacturers of premium imaging products, has expanded their MICR cartridge analysis to comply with both US and Canadian Standards.

ILG's product offering for MICR supplies is one of the strongest in the industry. The manufacturer offers MICR compatibles for over 120 popular printers from various manufacturers, including Hewlett-Packard,

Canon, Lexmark, Dell and IBM.

"Our line of MICR cartridges is very popular with dealers who target the financial institutions," says Joe Shulman. "To make cartridges that meet the standards of the most reputable banks, you have to be focused on quality. Our MICR cartridges are guaranteed to produce MICR-encoded text that is readable by all major financial institutions."

At ILG, all incoming MICR toner meets American Bankers Association requirements as well as American National Standards Institute signal strength minimums. In addition, every ILG MICR cartridge undergoes stringent tests to meet and exceed minimum signal strength. According to Shulman "We know our MICR cartridges comply with US and Canadian standards, because we test the signal strength of each and every MICR cartridge we manufacture."

Founded in 1988, ILG is a veteran manufacturer of high-quality imaging supplies. The company was one of the first and is now one of the largest manufacturers of compatible printer, fax, copier and multi-function machine cartridges. Equipped with the industry's most advanced manufacturing equipment and a highly regarded reputation for product quality, ILG serves as one of the nation's premier beta-test sites for advances in cartridge chip technology, toner formulation, and other aftermarket innovations.
